SUMMARY

Industrial Engineer with interns across manufacturing, supply chain, and IT, focused on Python data analysis, machine learning, and workflow automation. Skilled at building end-to-end Python pipelines that ingest ERP, API, and SAP data, engineer features, train predictive models, and surface results through Streamlit apps for non-technical stakeholders.

TECHNICAL SKILLS

Python & Data: Python (Pandas, NumPy), data cleaning, feature engineering, ETL pipelines, REST APIs, ERP/SAP workflows

Machine Learning: Scikit-learn, regression, time-series forecasting, LLM and RAG fundamentals

Databases & BI: SQL (PostgreSQL, MySQL), Streamlit, Power BI (DAX), Tableau, Matplotlib, Excel (Power Query, Pivot)

Tools: Git, GitHub, AWS fundamentals, Jupyter, Microsoft Fabric, Power Apps

EXPERIENCE

Supply Chain Intern - Data Analytics & Automation | Standart Cıvata

Feb 2026 - Jun 2026

- Built Python data transformation pipelines that parse, validate, and consolidate API, Excel, and SAP data sources, automating roughly 90% of previously manual reporting work.
- Developed Streamlit applications used by 6 stakeholders, including the Supply Chain Director and Logistics Manager, to monitor order-to-shipment performance.
- Packaged 4-6 internal Python tools into standalone executables, enabling non-technical users to run data workflows without engineering support.

Software Developer Intern | Monovi

Nov 2025 - Dec 2025

- Built a Power Apps training management application that streamlined employee training assignment and reduced manual HR coordination.
- Contributed to data integration initiatives across Microsoft Fabric and Power BI in an on-site IT consulting environment.

Junior Planning Specialist | Karma Yüksek Teknoloji

Jun 2025 - Sep 2025

- Extracted, cleaned, and validated ERP data using Python and SQL, building reusable scripts for recurring reporting and data quality checks.
- Translated raw production data into KPI definitions covering OEE - availability, performance, and quality losses - that supported MPS and MRP planning decisions.

Production Intern | Bilicra

Jun 2024 - Jul 2024

PROJECTS

Strawberry Harvest Yield Forecasting (Döhler) - Python, Pandas, Scikit-learn

- Built an end-to-end ML pipeline forecasting harvest yield from operational, sensor, and weather data; engineered lag, rolling-window, and weather-based features and selected the best regression model using MAE and RMSE.

Material Depletion Forecast - Python, SQL

- Built a Python forecasting tool combining inventory, purchasing, and MRP data to predict raw material depletion dates, giving procurement earlier visibility into upcoming shortages.

Logistics Performance Analysis App - Streamlit, Python, REST APIs

- Built an API-driven Streamlit dashboard with Pandas-based KPI logic that replaced manual Excel pivot reporting and became the primary logistics monitoring tool for 6 stakeholders.

EDUCATION

Manisa Celal Bayar University | BSc, Industrial Engineering | GPA: 3.00 / 4.00

Graduated 2026
